

Dice Rolling Simulator

Project Brief

The Goal of this project, like the title suggests, involves writing a program that simulates rolling a dice. When the program runs, it will randomly choose a number between 1 and 6. (Or whatever other integer you prefer — the number of sides on the die is up to you.) The program will print what that number is. It should then ask you if you'd like to roll again. For this project, you'll need to set the min and max number that your dice can produce. For the average die, that means a minimum of 1 and a maximum of 6. You'll also want a function that randomly grabs a number within that range and prints it.

Concepts to keep in mind:

- Random
- Integer
- Print
- While Loops

Deliverables

This project will help establish a solid foundation for basic concepts.
